Education:

- 2 years, Computer Science, LTH
Duration: (2013 - ongoing)
- 4 years, Nanoscience, LTH
Duration: (2008 - 2014)

Experience:

AXIS | Consultant Programmer:

Location: Lund, In-house.

Duration: April 2014 - Present.

The assigned work consists of maintaining and extending a Python back end script and its corresponding viewer. The back end extracts information about different internal product platforms. This information is displayed in the web based viewer which makes heavy use of JavaScript.

EkoVent | Consultant Programmer:

Location: Vellinge, Telecommute.

Duration: September 2014 - Present.

The second assigned project focuses on storage of additional information and the display of gathered data from testing equipment. As with the earlier EkoVent project, everything is done in VisualBasic inside of Microsoft Excel.

EkoVent | Consultant Programmer:

Location: Vellinge, Telecommute.

Duration: April - June - 2014.

The task was to update and extend a Microsoft Excel spreadsheet through VisualBasic programming. The main goals were to provide additional sanity checks for entered values and storage of said values.

Dresser Wayne AB | Customer Support:

Location: Malmö, In-house.

Duration: June - November - 2013.

The assignment had two major parts. First, managing the customer support queries for Scandinavian customers. Secondly, enter orders from the online sales system into the production database by hand. To ease a time consuming step of the input process, I crafted a small program and shared it with the team. Seeing my colleagues use my software to avoid frustration is what made me change my master.
